

Comfortable. Brighter. Beautiful.

2022

S-GROUP® is a company that everyday deals with the development of complex web applications, marketplaces or subscription products. We integrate apps and modules with every system and provide a full cycle of web development and automation of business. One of our strengths is the development of web services for various purposes and levels of complexity using modern technologies and development tools.

Building highly loaded, scalable systems using load balancers and database clusters. In addition to complex development, we are ready to implement individual components of already existing web applications. Also, we provide website development for business sites, landing pages, e-commerce, etc.

DeepReader

Mobile App, Social Media Reader
with Arcade Elements

Deep Reader is a unique software platform that allows readers to learn more about their favorite books and discuss them with their friends or celebrities who like to read books. The S-GROUP® team developed the logic and concept of the product, the algorithms of work aCd and the mechanism for the project monetization.

Client
Ukraine

ListrLink

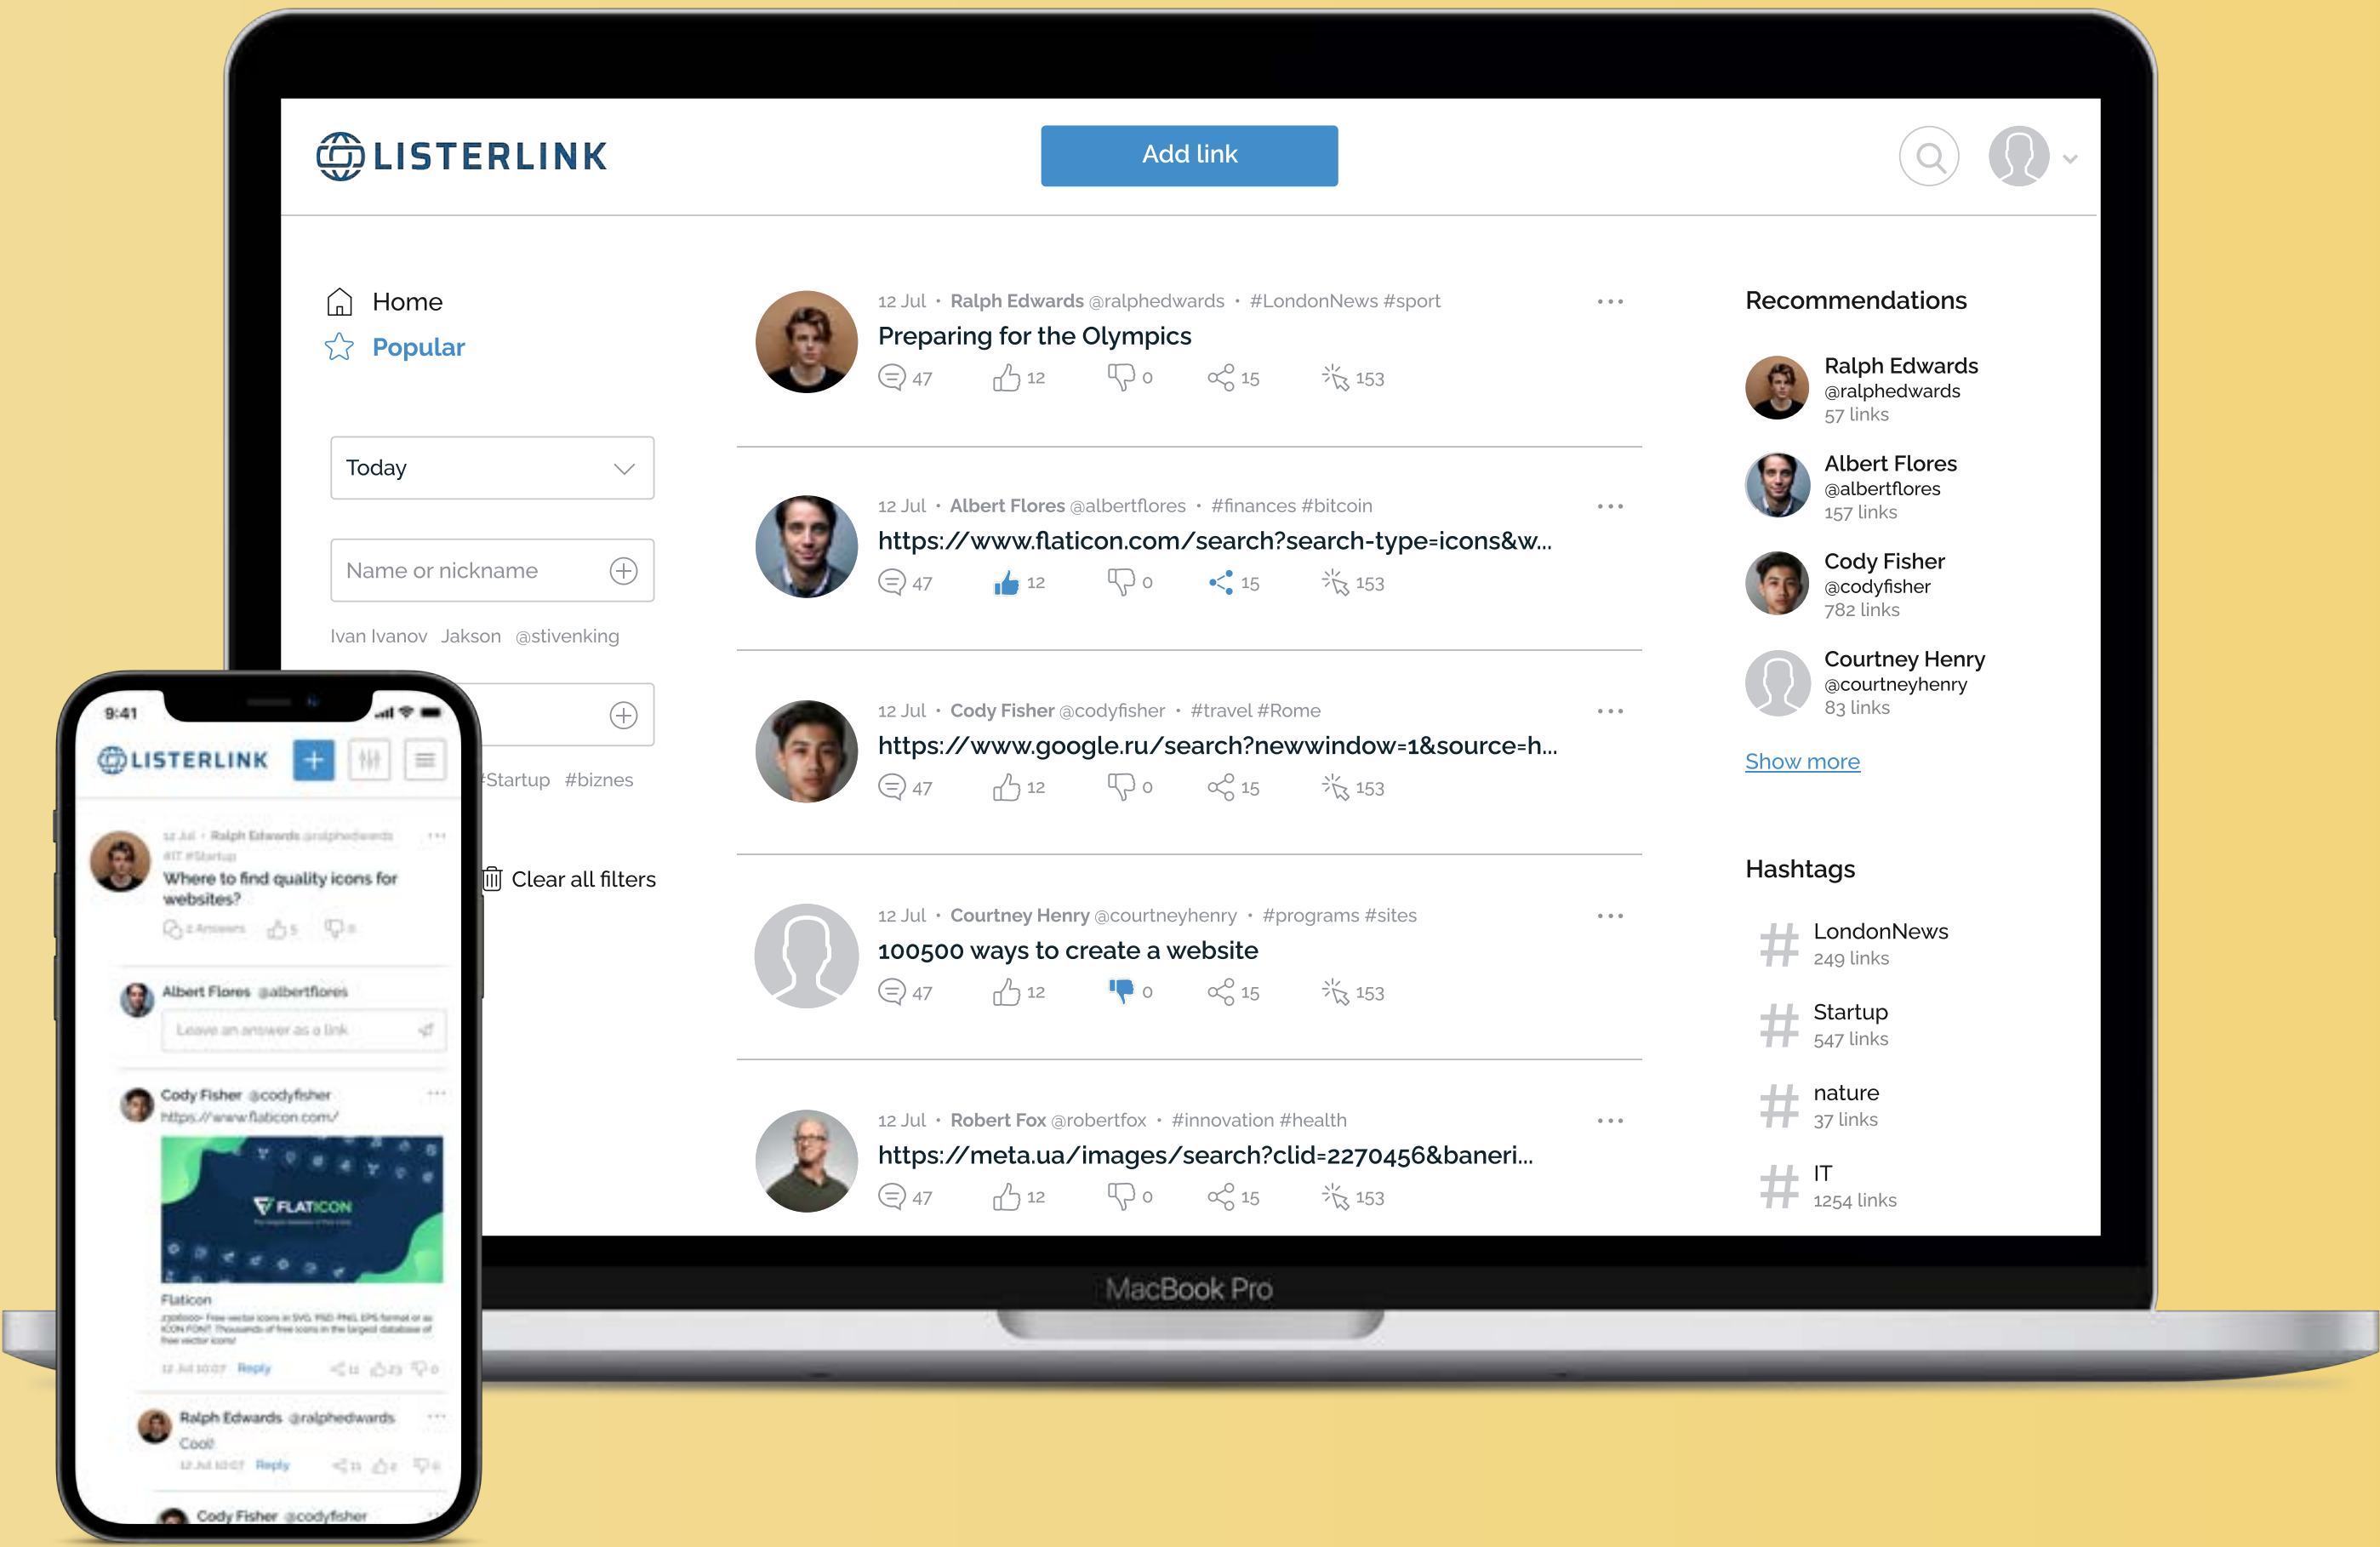

Social Media Platform

ListrLink is a new social media project, focused mainly on sharing links with followers or following people who could share links which are of interest for the user. Also, the user could use it to save link in their feed privately. In the previous version, there was a feature where people could ask a question and get useful links.

Stack: Laravel, MySQL, HTML5, CSS3, VueJS etc.

Client
USA

Qr code for Taxpayers

Concept of a Web app

S-GROUP® developed a concept of a Web app for creating and editing forms for taxpayers. By generating a QR code with a direct link to the “sample form”, the application will significantly shorten the process of searching and filling out paper forms for taxpayers. It will also greatly simplify the procedure for filling out paper documents.

Client
Ukraine, Vinnitsa Tax Administration

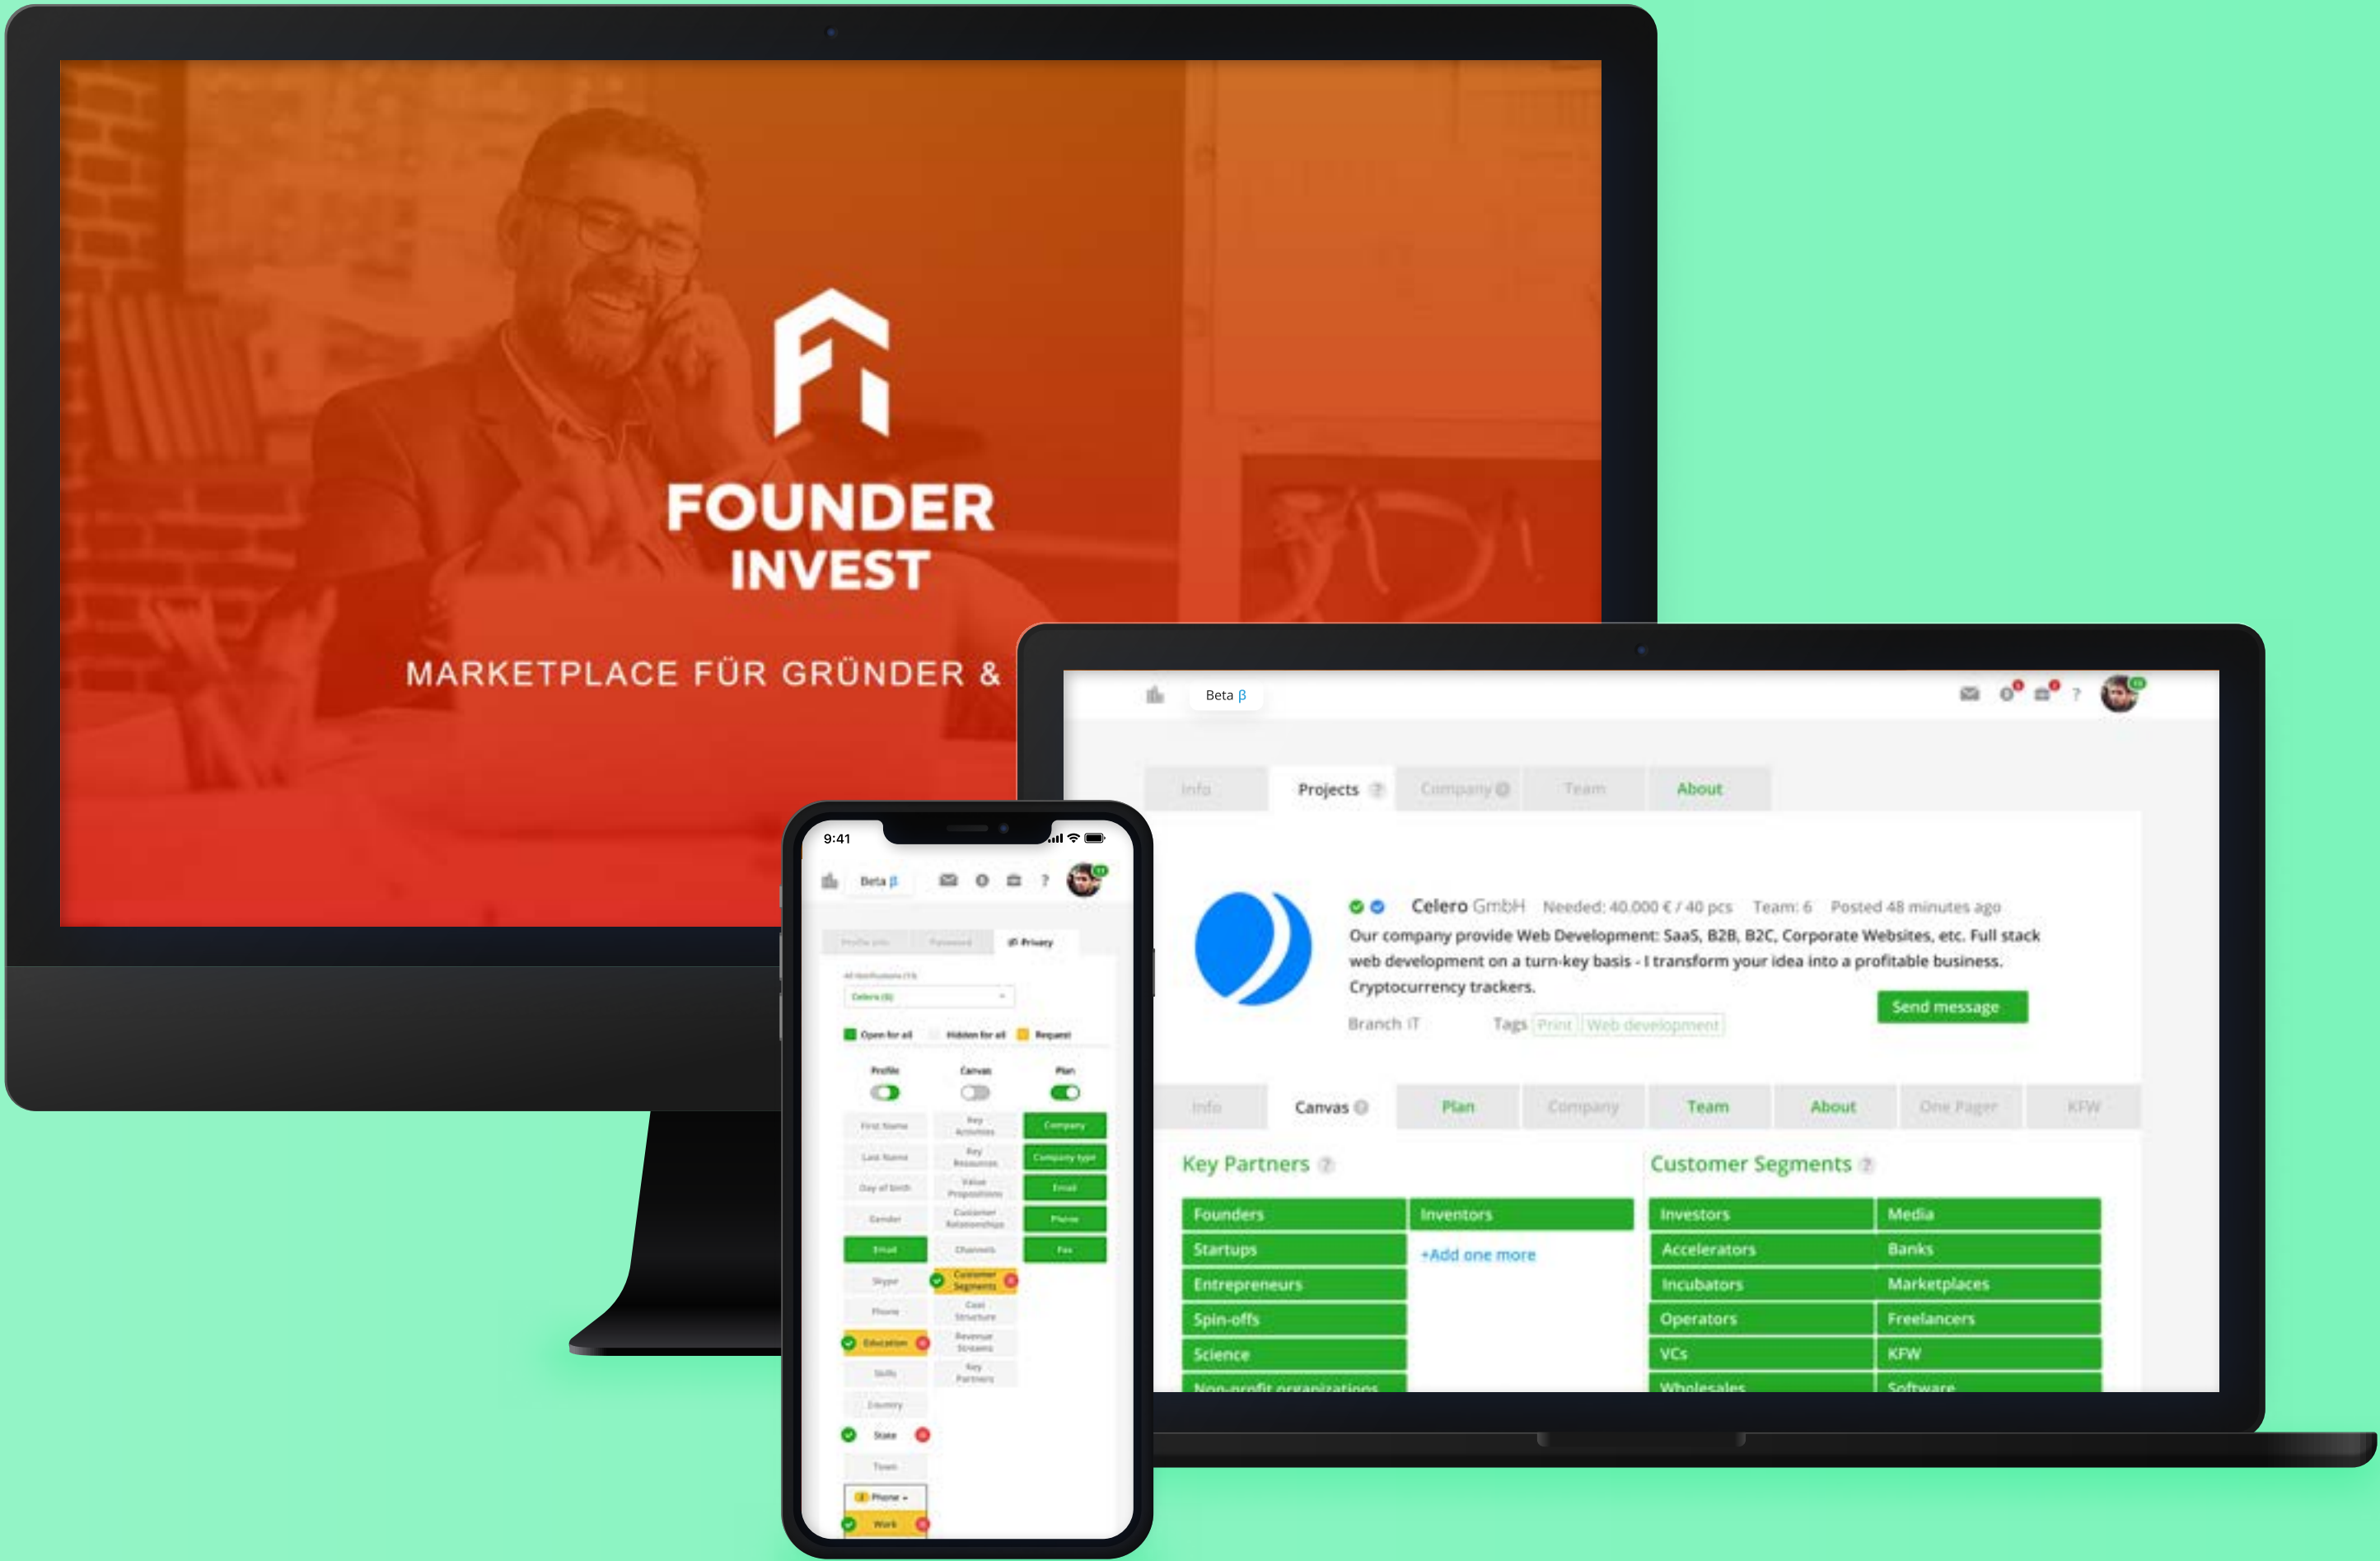

FounderInvest

Fintech, Marketplace for Startups
& Investors

The S-GROUP® team has developed a platform that brings together investors and startups looking for finance. The platform secures transparency during the process searching for finance and investment opportunities and after grant is awarded or finance secured. Stack: Laravel, PostgreSQL, Angular.

Client
Germany, FounderInvest

Telegram Folders

Messaging App upgrade

The S-GROUP® team has developed a concept for implementing folders to sort contacts in the telegram messenger application. This will help avoid the duplication of contacts. The folders will contain groups in which the contacts are allocated and for each group the user can configure their own notifications and rules. All unassigned contacts are stored in the “unassigned” group or the All Contacts group next to the ARCHIVE folder.

Client
United Arab Emirates

KNP

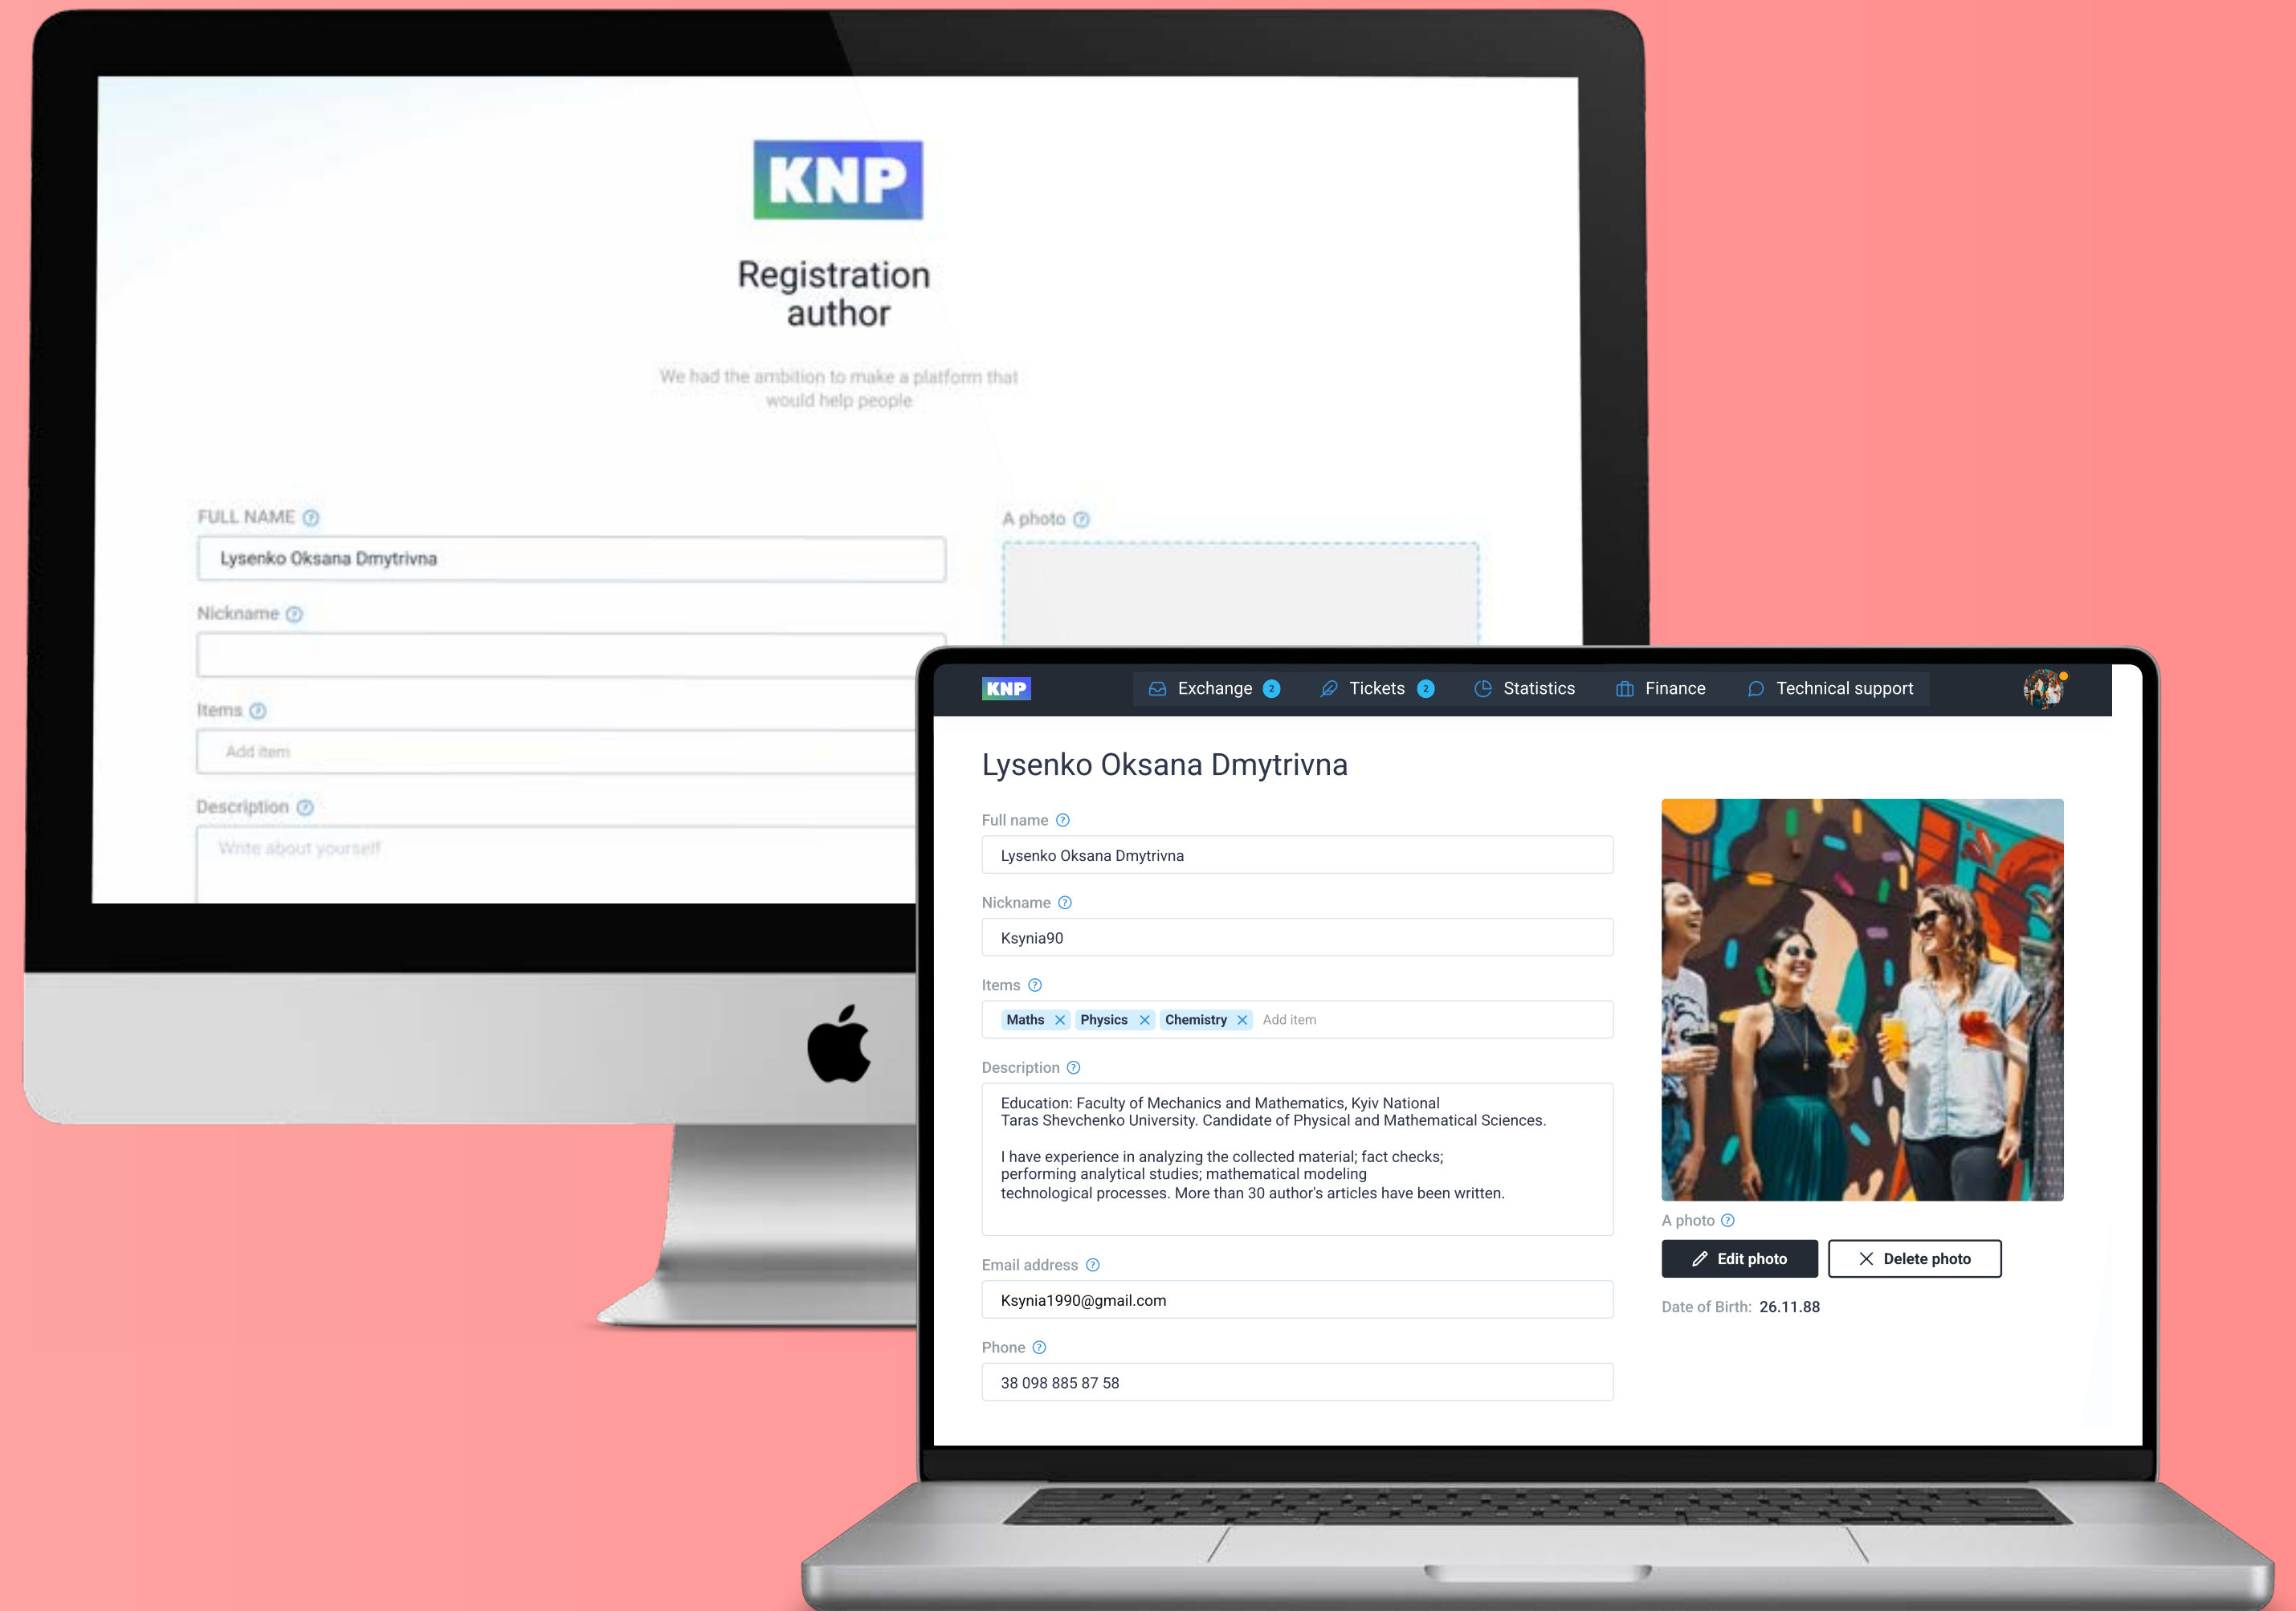

CRM, Freelance Marketplace,
Task Management Software Tool

The goal is to create an autonomous platform that could optimize the processes of receiving, processing and completing orders, as well as making it possible to account for and analyze the data received. The project combines a CRM system with a freelance marketplace and an accounting program.

Stack: Laravel, PostgreSQL, Angular.

Client
Austria, KNP

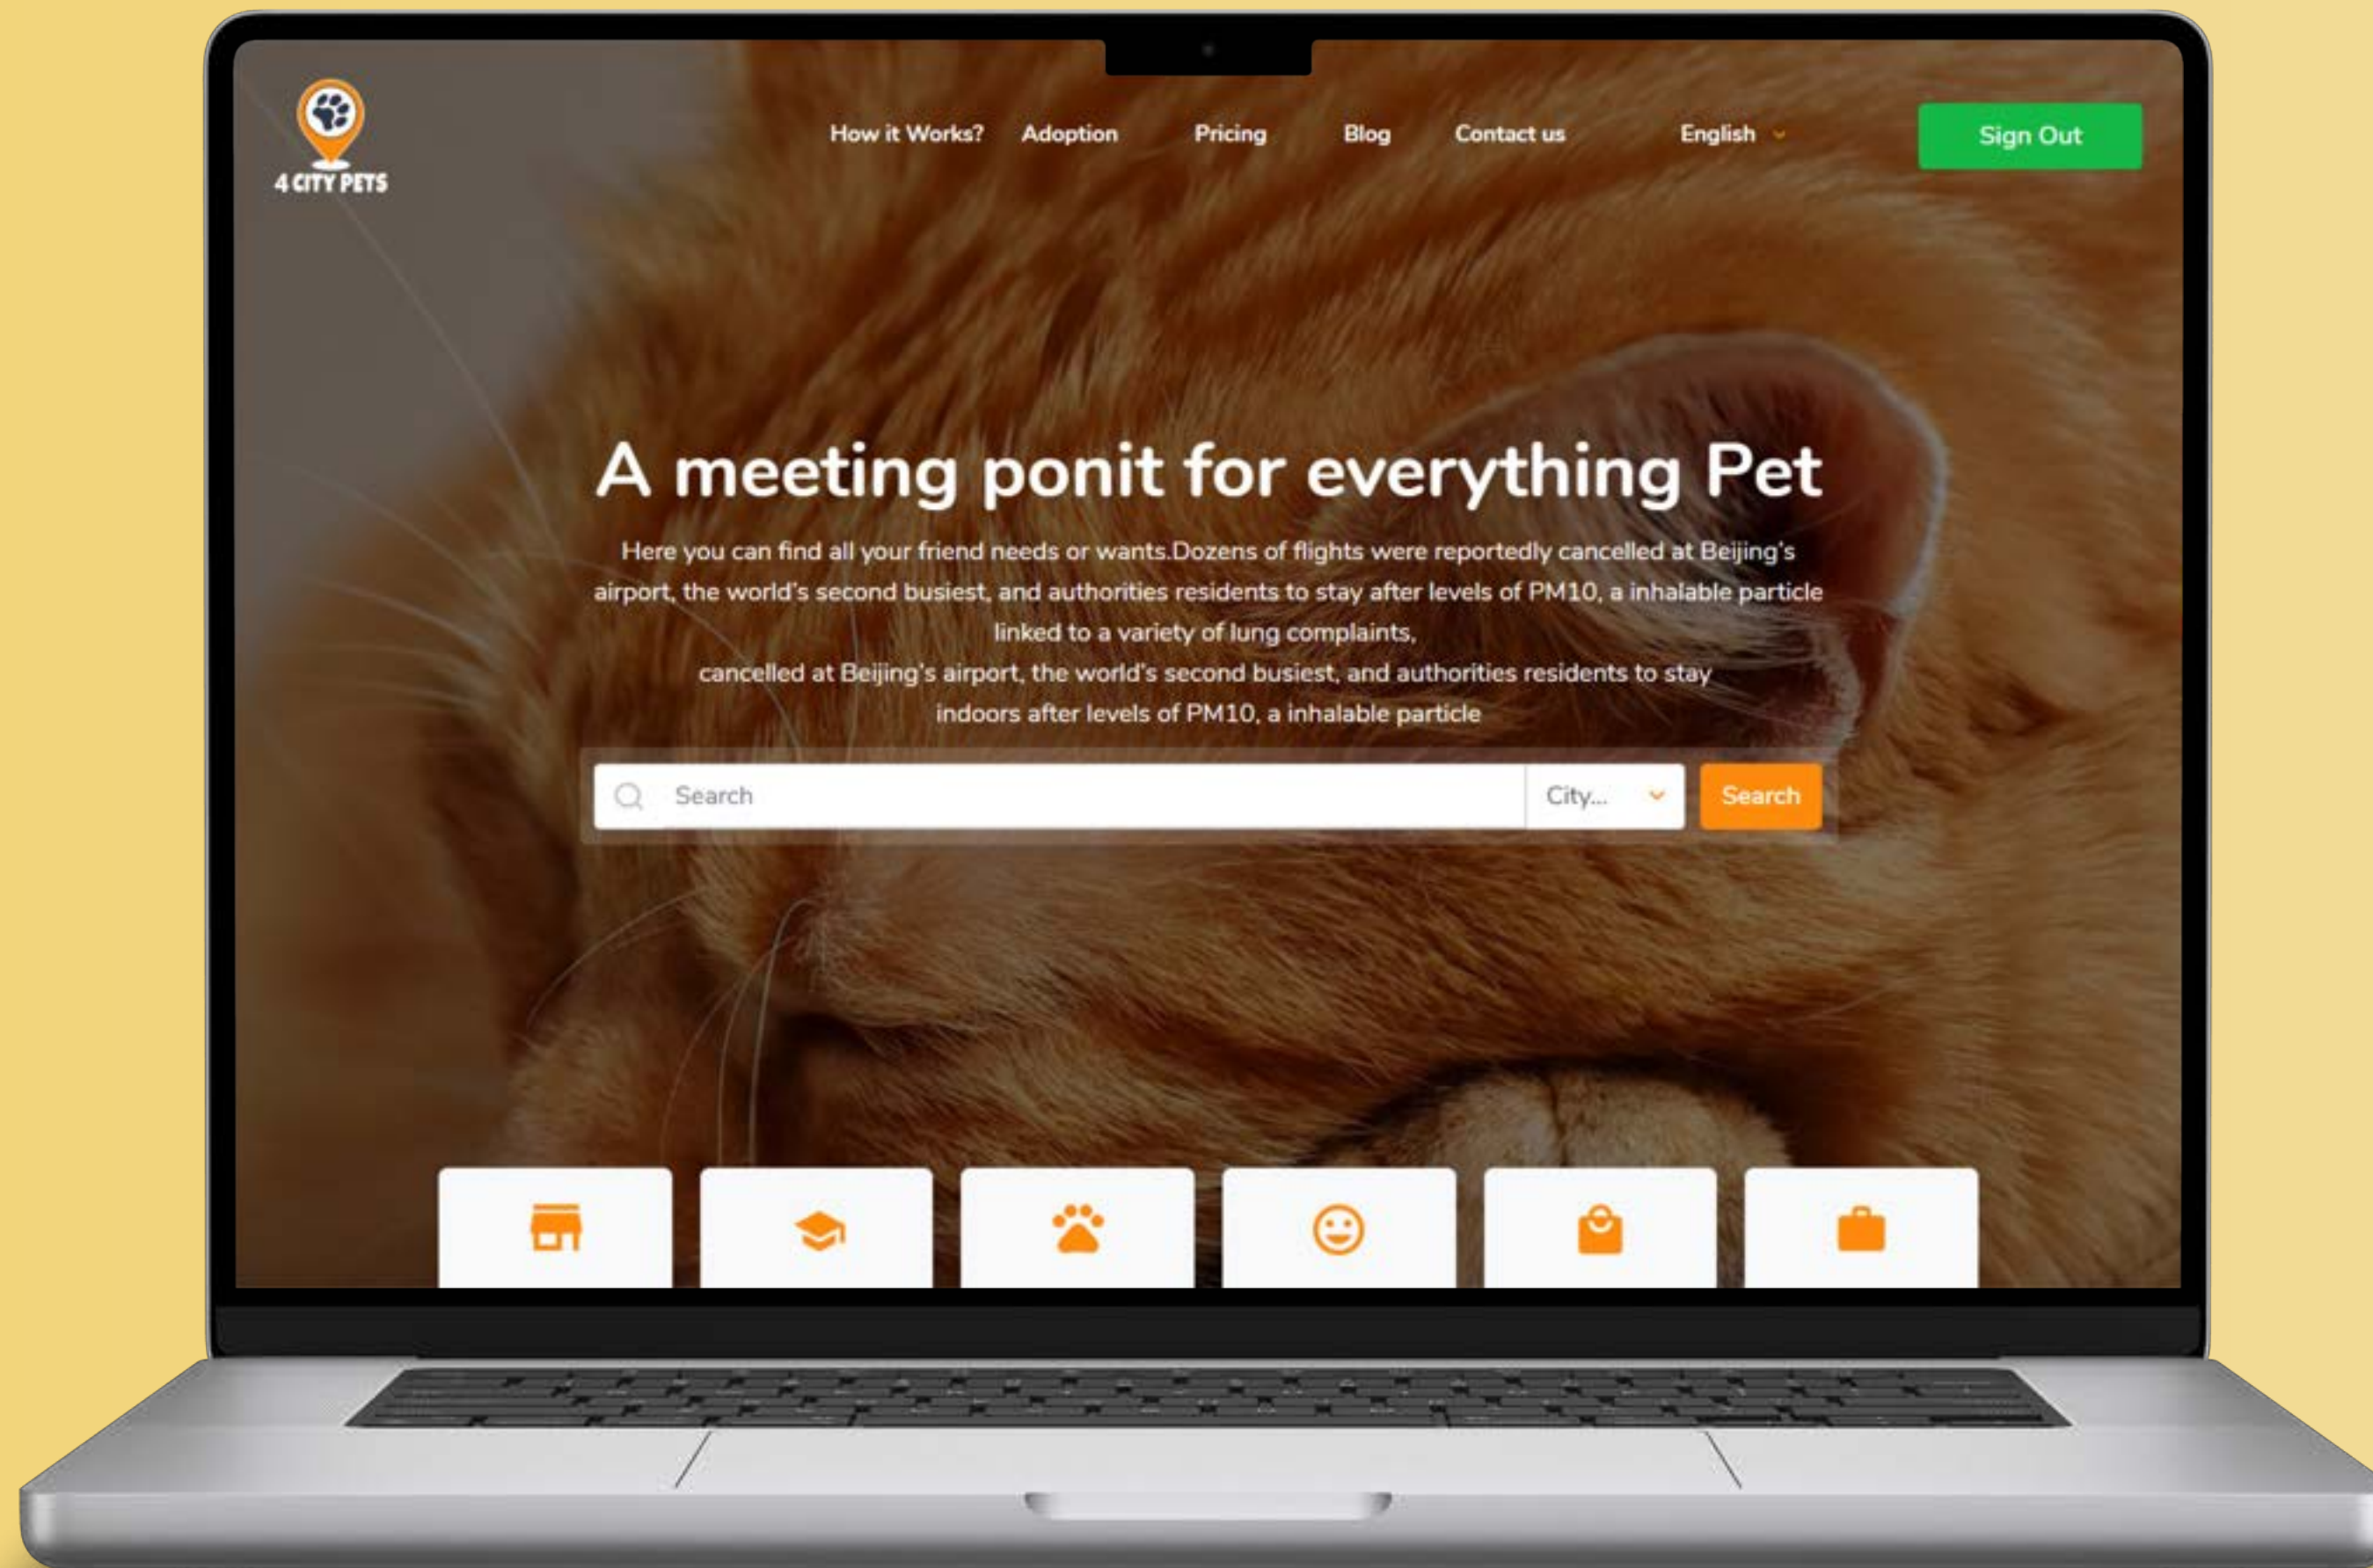

4CityPets

Marketplace

The S-GROUP® team has developed a multi-vendor B2C marketplace, focused on pet owners and pet service providers. Users can register and look for services or products for their pets. Products and services are classified by categories, location, etc. A service provider or a pet shelter, after registration, pass verification by the system admin. Stack: Laravel, PostgreSQL, Blade Laravel, etc.

Client
Portugal, 4CityPets

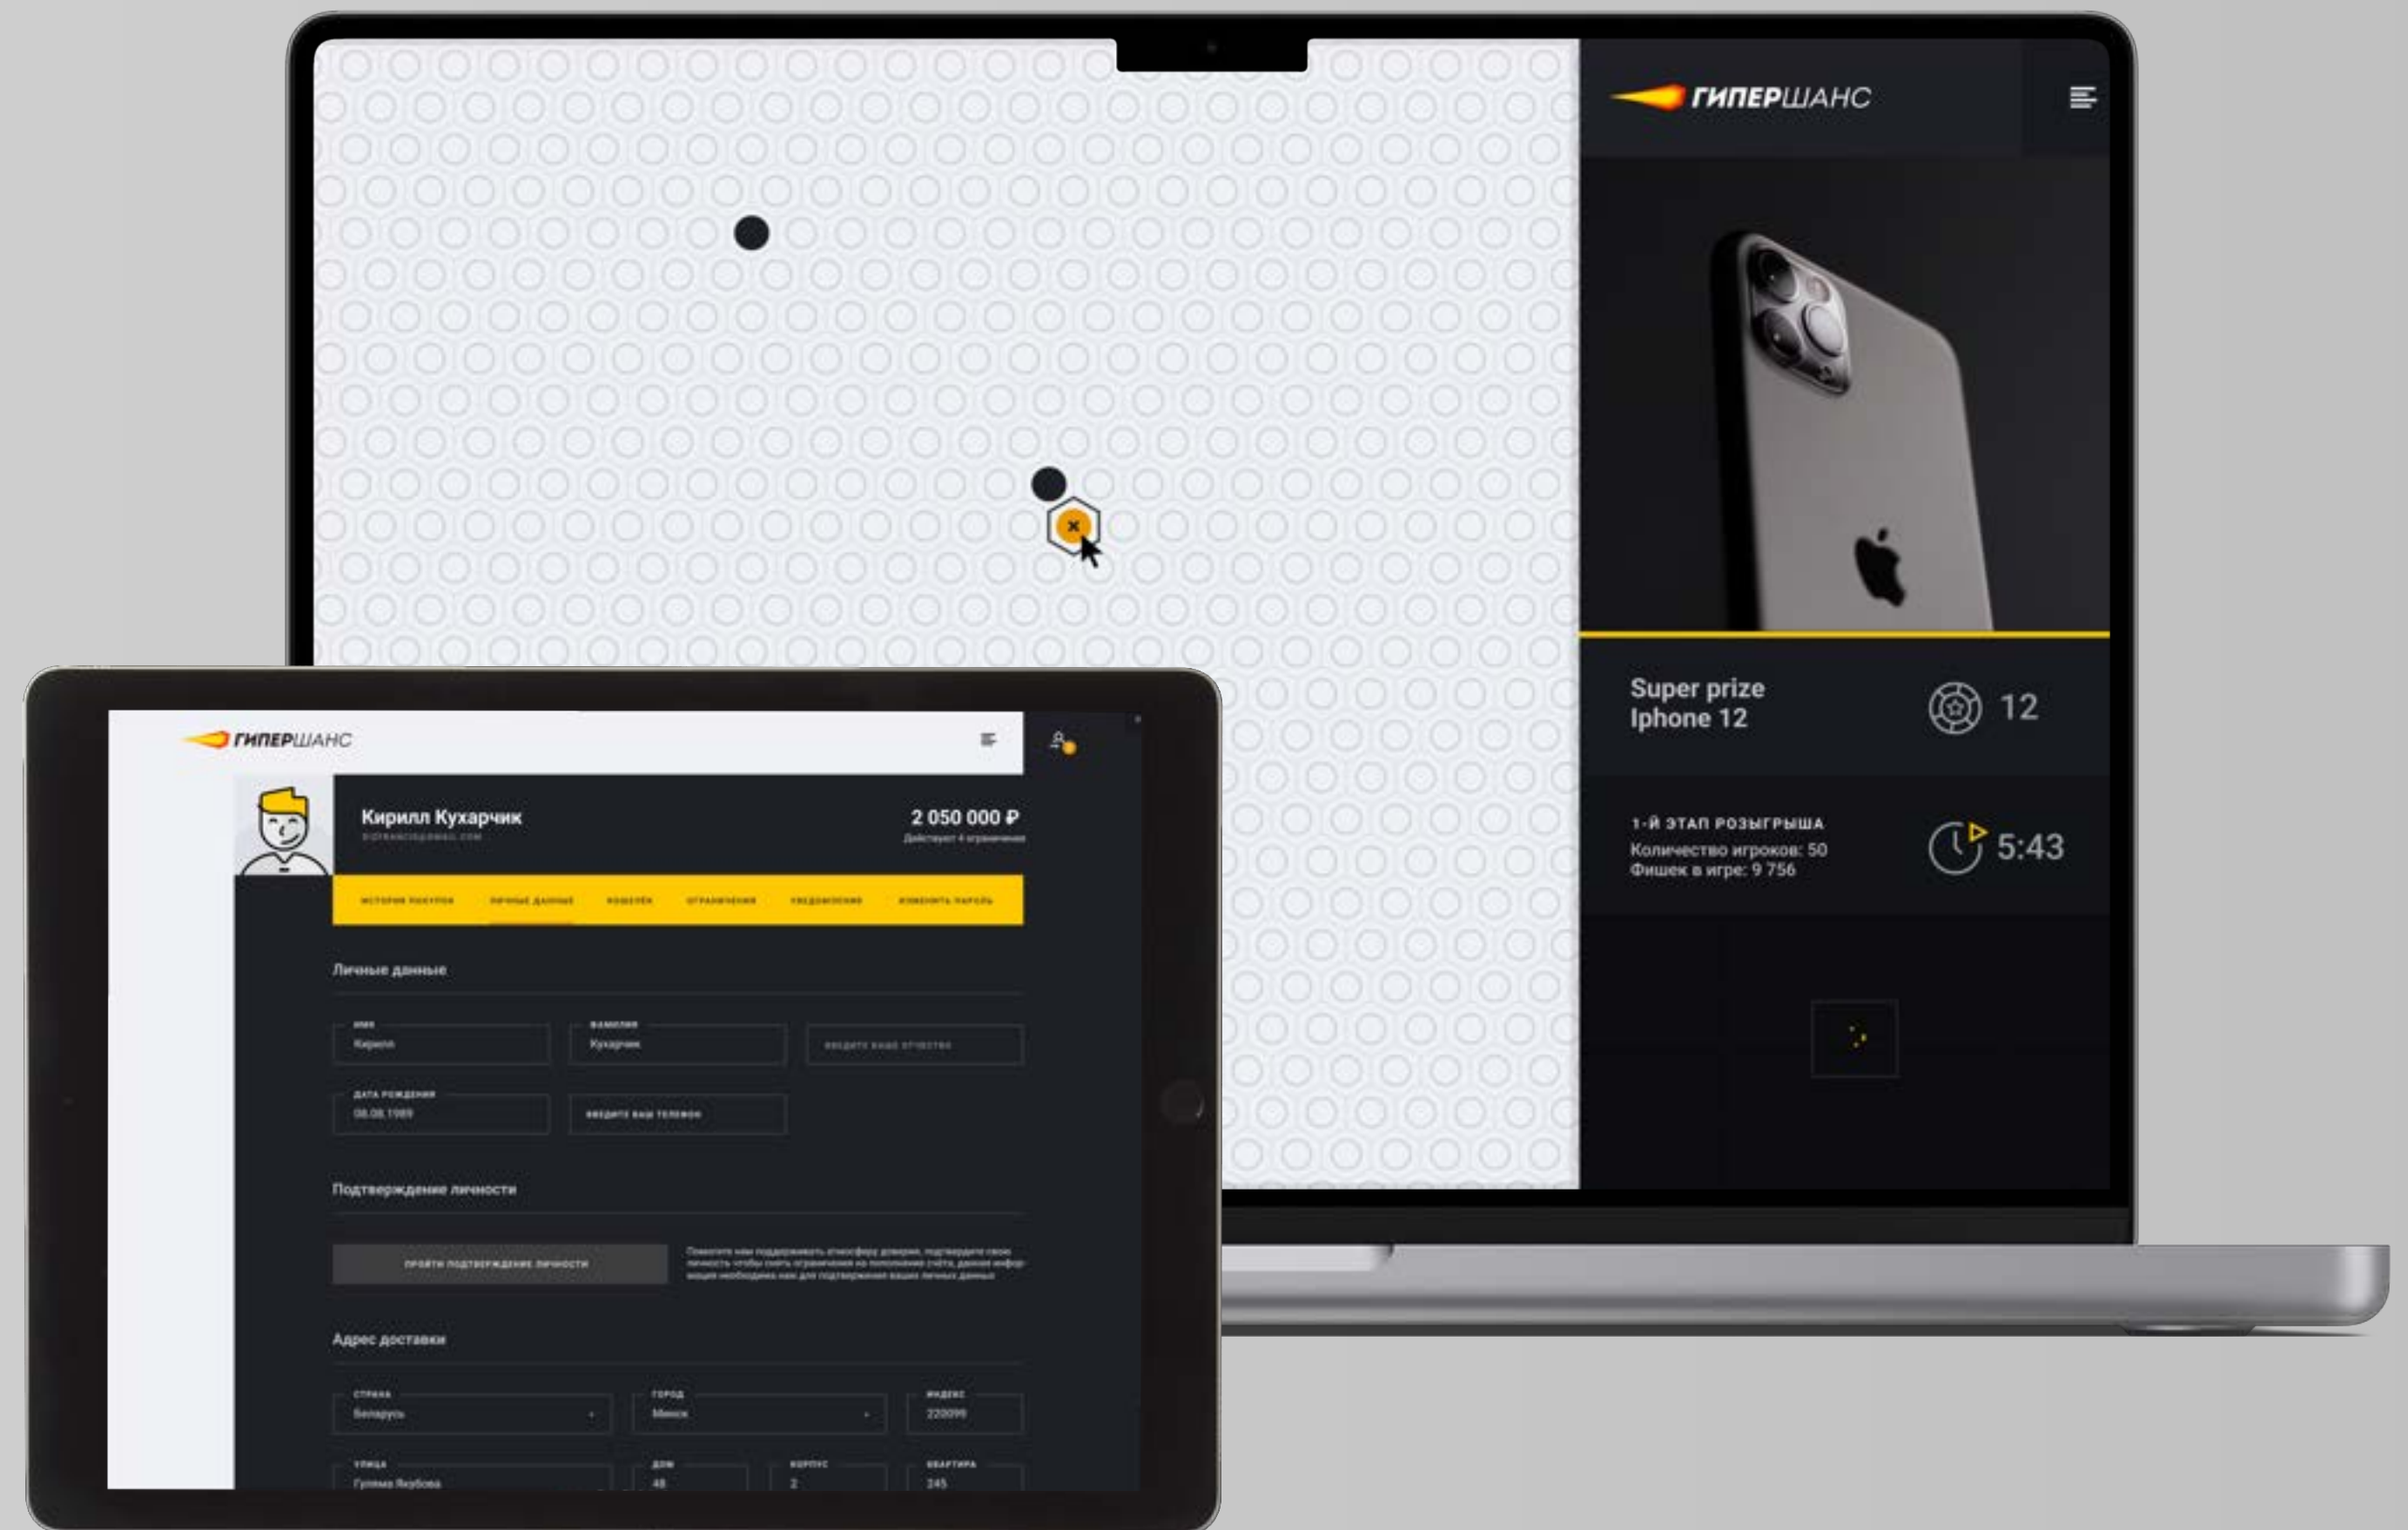

HyperChance

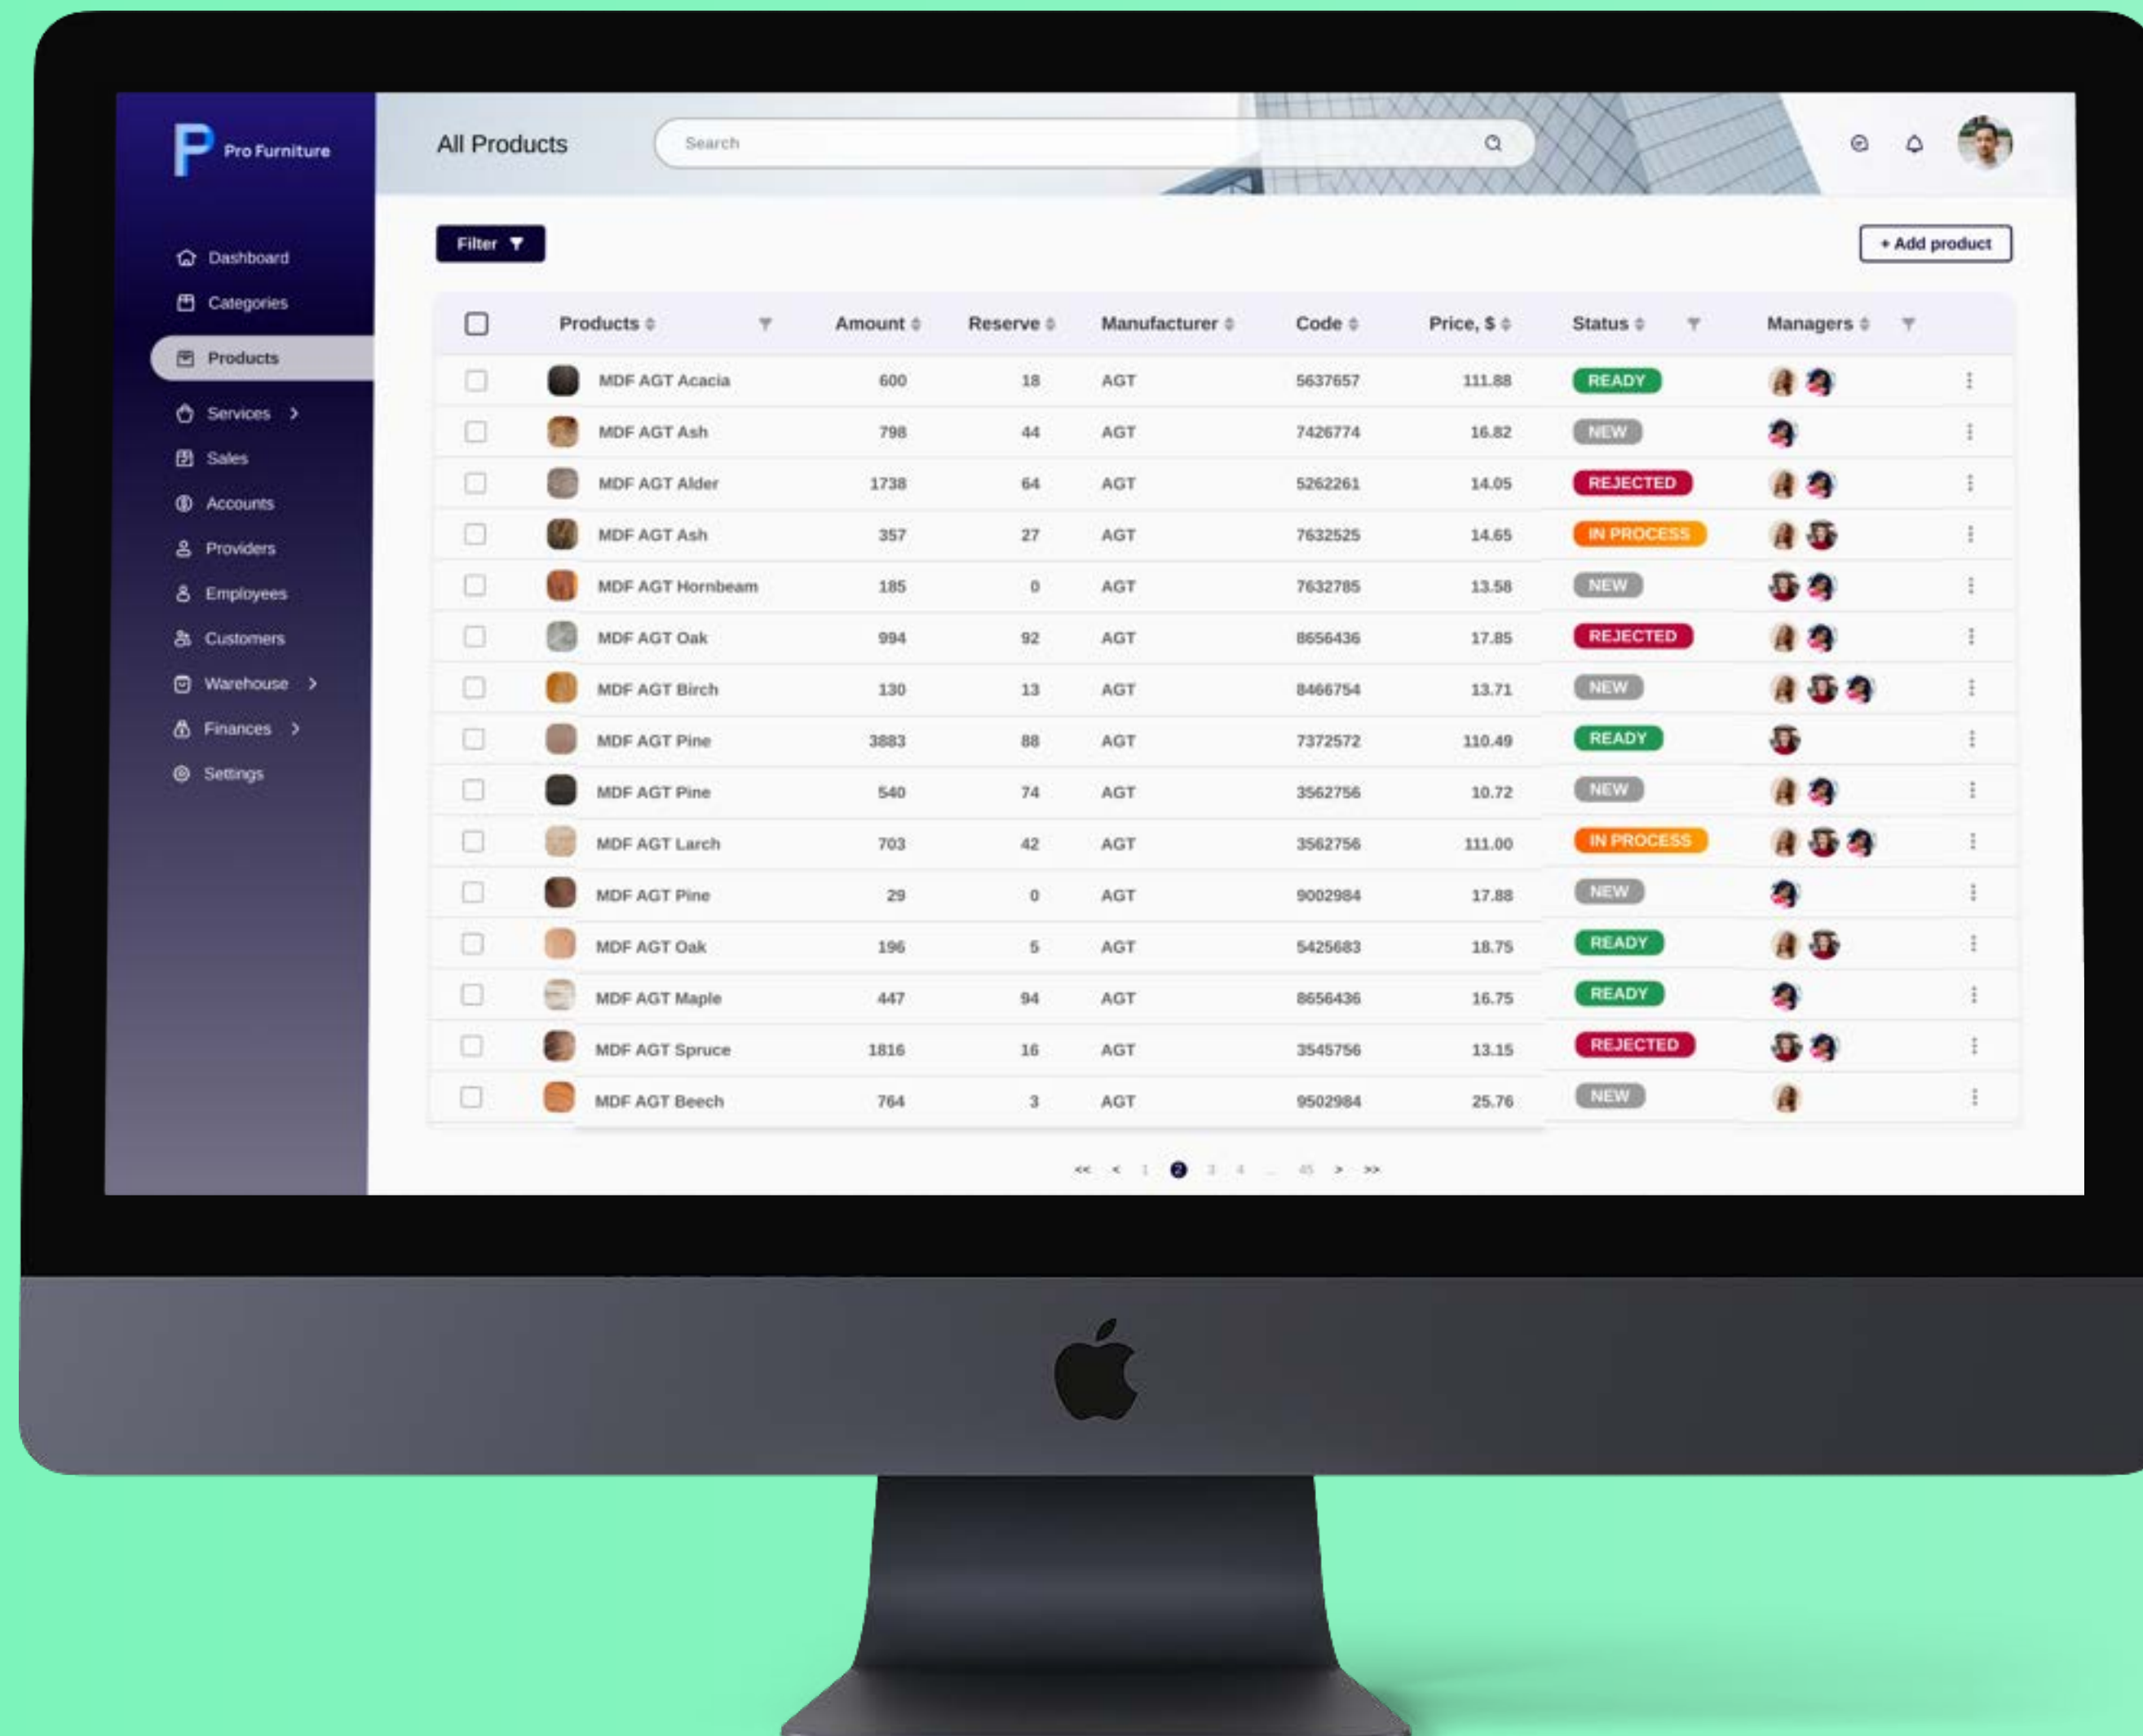

Game + Lottery

HyperChance is a unique game, created by mathematicians. The S-GROUP® team implemented the software platform using high-quality and scalable code. It allows 100+ users to play the same game at one “table”. The playing field consists of many cells.
Stack: Laravel, PostgreSQL, Angular.

Client
Kazakhstan, HyperChance

Pro Furniture

CRM + ERP

CRM + ERP System - a set of tools for organizing the company, that helps keeping track of Products and Services, Documents, Orders, Workers and Finances, Production and Warehouse status, Tasks and Projects.
Stack: Laravel, MySQL, Bootstrap, Phuse.

Client
Ukraine, CRM Pro

Aja

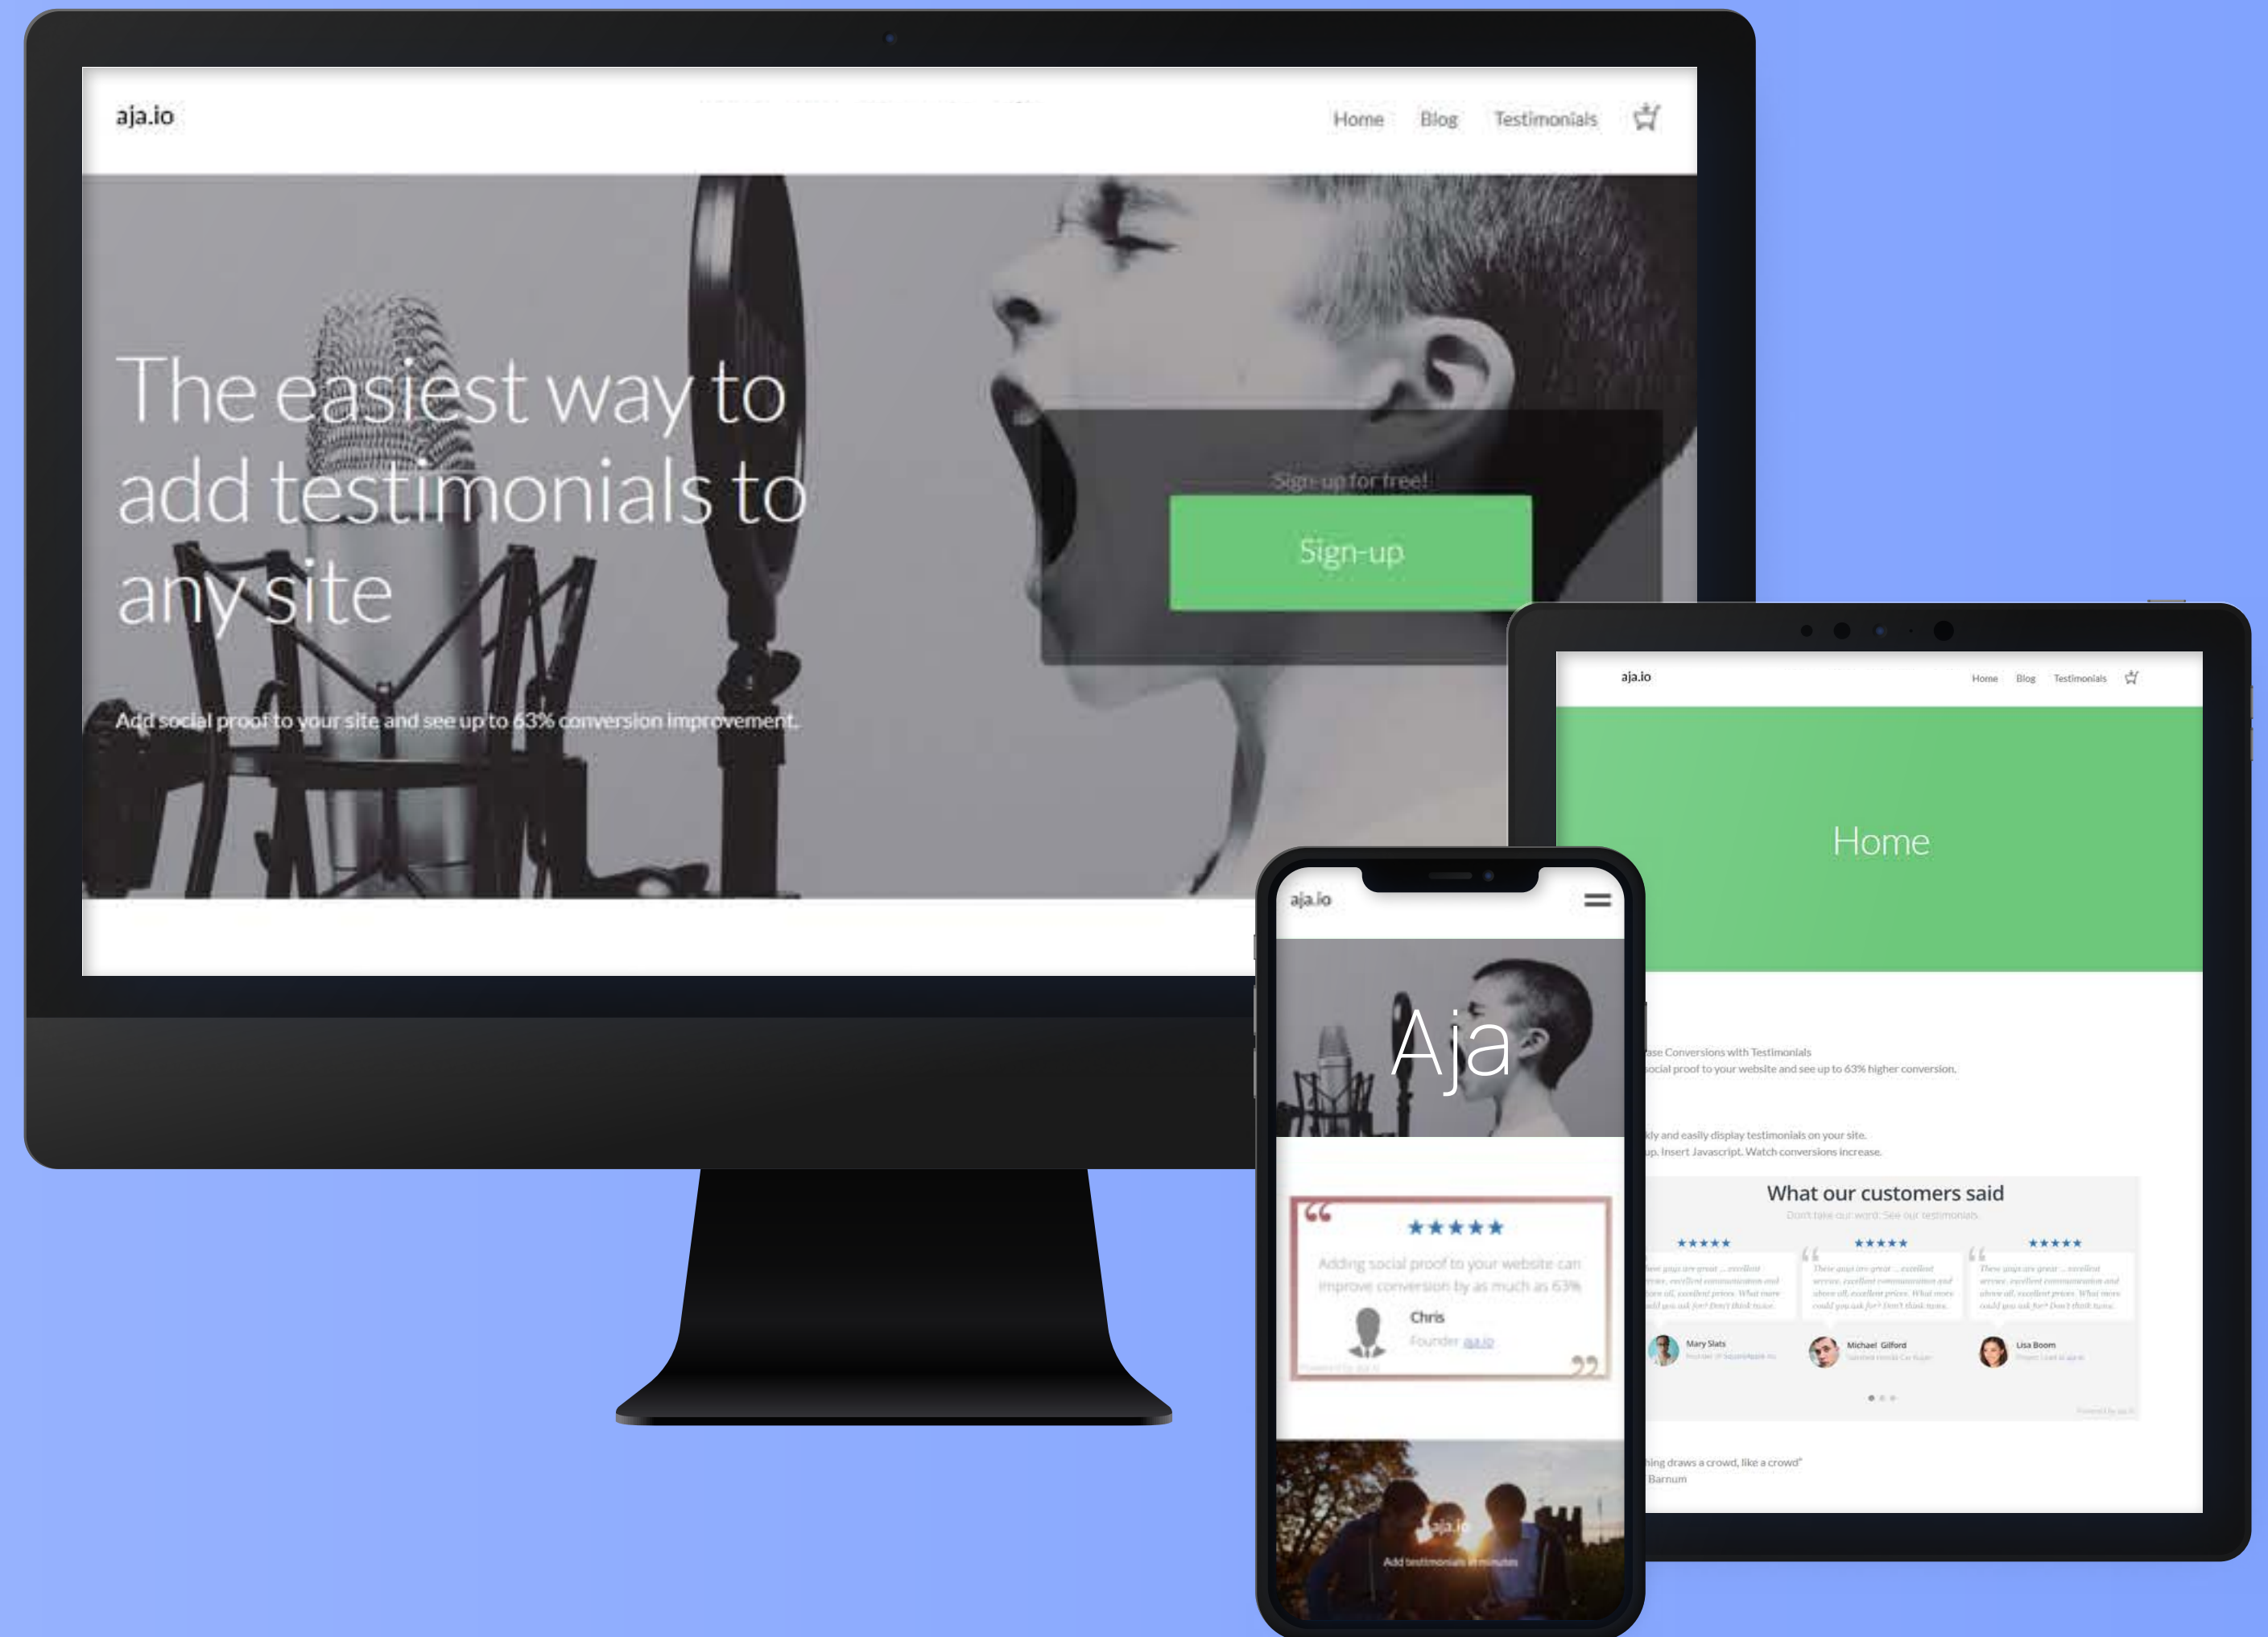

SocialProof SaaS product

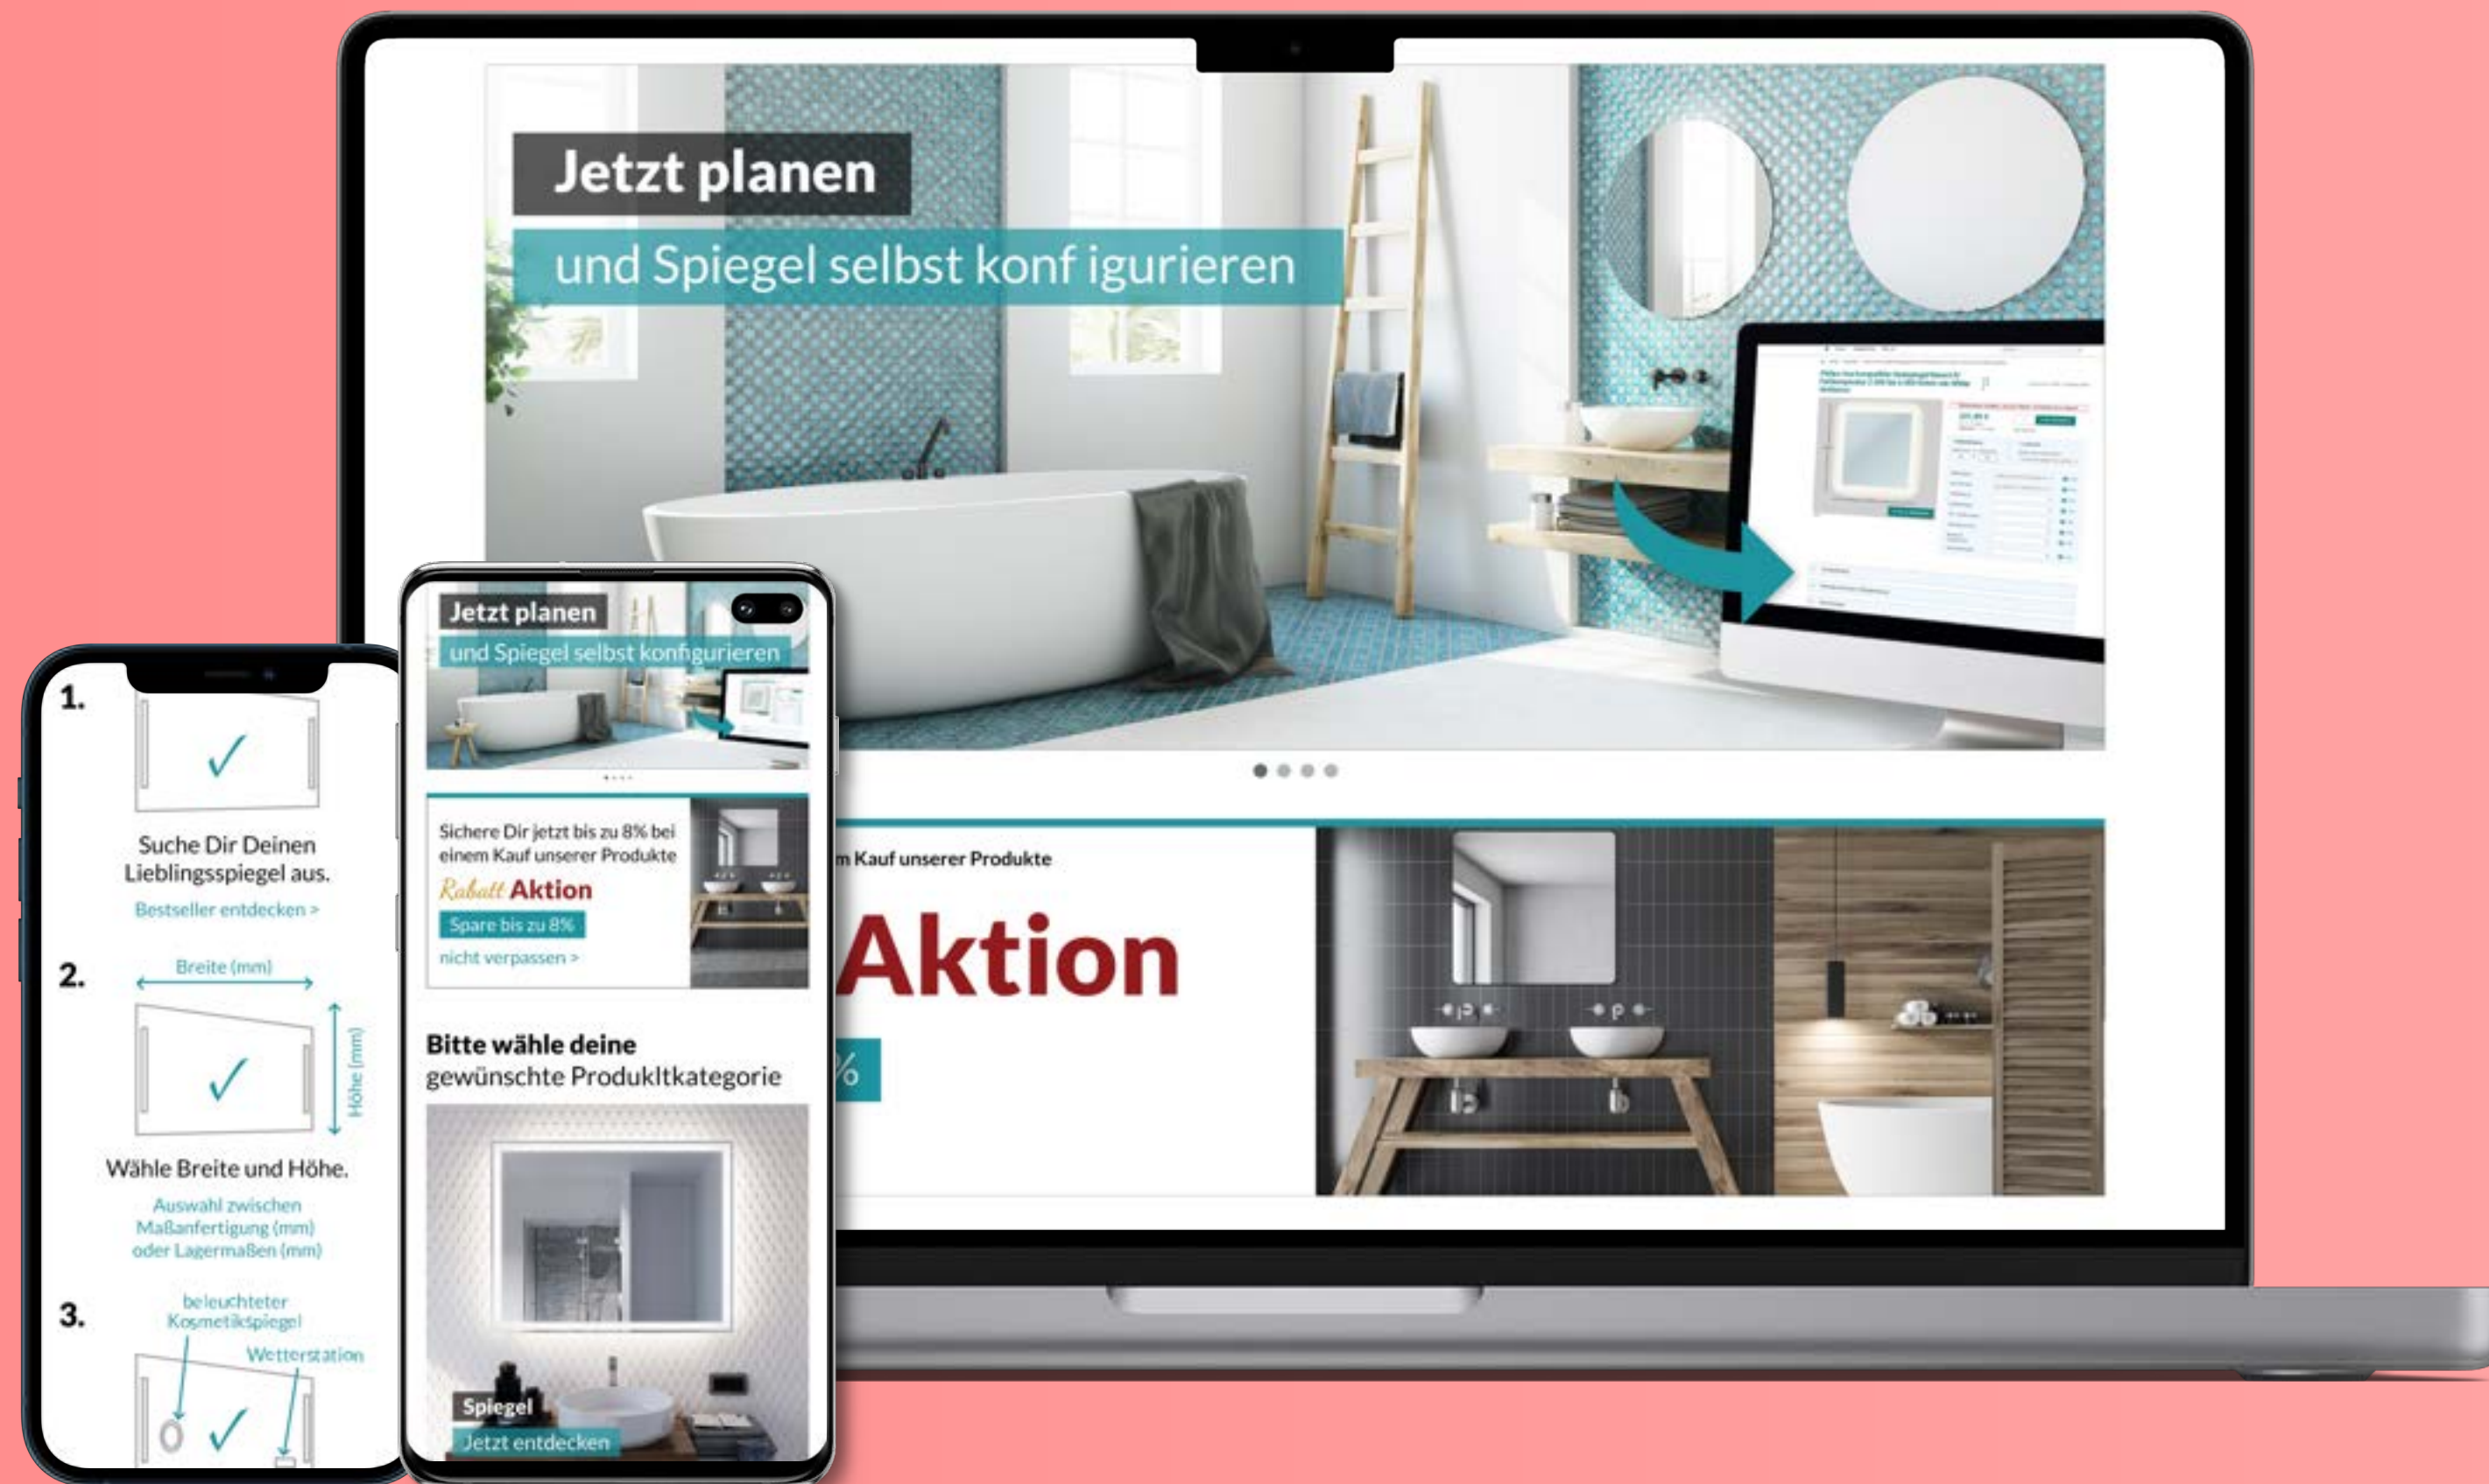

SocialProof SaaS product. This is a product to allow people to add testimonials to their website. This is a SaaS product that someone can sign up for. Once signed up, they get access to an admin console where they can configure settings, colors and, add testimonials.

Stack: PHP using the Laravel framework, MySql as the database

Client
USA, Aja

JTL Shop

CMS

CMS is designed for use in the German-speaking market, used by less than 1% of users. A feature of the system is the interface in German and the ability to integrate the store's database with large sites such as Amazon and production management systems.

Client
Germany
